Abstract—This document is a model and instructions for LaTeX. This and the IEEEtran.cls file define the components of your paper [title, text, heads, etc.]. *CRITICAL: Do Not Use Symbols, Special Characters, Footnotes, or Math in Paper Title

Index Terms—component, formatting, style, styling, insert.

I. INTRODUCTION

II. PREPARE YOUR PAPER BEFORE STYLING

=====something something======

In our problem formulation, we have a set of I supplier, J distribution centers (DCs), and K customers, which can be thought of as supermarkets or stores. We act as both the suppliers and distributors of a product, starting without any distribution centers initially. The goal is to transport the goods while optimizing for the costs, carbon emissions, and customer utility. As we have multiple objective functions, we often have to optimize for the best compromise [1], as an optimal solution for all might not exist.

There are costs associated with acting as bost supplier and distributor. First, the distribution centers must be built, if they haven't already. This has a cost associated per unit of area. Note that we can include the cost of buying the land into this if required, and we note we can set the costs as 0 if we already own the distribution centers. Next, there is also a cost associated with running the distribution facilities. This is proportional to the size of the facility. Although costs might vary per distribution center, we assume for simplicity that the costs are flat per unit of area. Finally, we also assume for simplicity we have infinite trucks to transport the goods.

There is also a cost associated with transporting te goods from the supply center to the distribution center, then from the distribution center to the customer. This is proportional to the number of trucks required, the distance between the locations, and the cost of transporting per km.

Identify applicable funding agency here. If none, delete this.

Finally, goods can be damaged in transport. We represent this as opportunity cost, as we can't sell damaged goods. The cost is proportional to the price of the object, the damage rate per km, as different objects could have different rates, and the distance traveled.

For carbon costs, it is proportional to the carbon efficiency of the vehicle (measured for example as carbon emissions / km), how far we must travel, and how full the truck, as more weight could result in more emissions Find reference for this. Note we assume that all the trucks must return to their original individual supply centers, and so in one way there is the cost associated with the weight, but in the other the truck is empty. Customer satisfaction is proportional to the arrival of the vehicles to the customer. If they are within a reasonable tolerance, it incurs no penalty. But if the vehicle arrives too late or too early, we incur a penalty proportional to how late or early we are.

Sets

- I : Set of suppliers
- J : Set of distribution centers (DCs)
- K : Set of customers

Parameters

- d_{ij} : Distance from supplier i to DC j
- d_{jk} : Distance from DC j to customer k
- N_k : Demand of customer k
- s_j : Area required for DC j
- ullet z: Construction cost per unit area
- ullet w facility cost per unit area
- e: Unit value of goods
- u: Damage rate per km
- δ : Transport cost per truck per km
- $\rho_{\rm max}, \rho_0$: Fuel consumption per km (full/empty)
- χ : Carbon cost of vehicle per km
- θ : Static carbon cost coefficient

- ϕ : CO₂ conversion per unit goods
- Q: Maximum vehicle load
- α_1, α_2 : Penalty coefficients for early/late delivery
- RT_k, LT_k : Time window boundaries for customer k
- \bullet U: Maximum penalty cost
- η_{j}^{max} : Maximum number of vehicles allowed at DC j
- \vec{S}_i : Maximum storage for DC i

Decision Variables

- $c_i \in \{0,1\}$: 1 if distribution center j is opened
- $x_{ij} \in \{0,1\}$: 1 if supplier i supplies DC j
- $y_{jk} \in \{0,1\}$: 1 if DC j serves customer k
- $t_{ij} \ge 0$: Quantity of goods transported from supplier i to DC j
- $t_{jk} \ge 0$: Quantity of goods transported from DC j to customer k
- $T_{jk} \ge 0$: Arrival time at customer k from DC j
- $\eta_j \in \mathbb{Z}_+$: Number of vehicles allocated to DC j

Objective Functions

1. Costs (C_c)

$$\min C_c = \sum_{j \in J} c_j (zs_j + ws_j)$$

$$+ \delta \sum_{i \in I} \sum_{j \in J} x_{ij} \lceil \frac{t_{ij}}{Q} \rceil d_{ij} + \delta \sum_{j \in J} \sum_{k \in K} y_{jk} \lceil \frac{t_{jk}}{Q} \rceil d_{jk}$$

$$+ e \sum_{i \in I} \sum_{j \in J} x_{ij} u d_{ij} + e \sum_{j \in J} \sum_{k \in K} y_{jk} u d_{jk}$$

$$(1)$$

2. Carbon Emission Cost (T_c)

$$\min T_c = \theta S_i + \sum_{j \in J} c_j \phi \sum_{i \in I} t_{ij}$$

$$+ \chi \sum_{i \in I} \sum_{j \in J} x_{ij} \left(\frac{\rho_{\max} - \rho_0}{Q} t_{ij} d_{ij} + \rho_0 d_{ij} \right)$$

$$+ \chi \sum_{i \in I} \sum_{k \in K} y_{jk} \left(\frac{\rho_{\max} - \rho_0}{Q} t_{jk} d_{jk} + \rho_0 d_{jk} \right)$$
(2)

3. Customer Satisfaction Penalty Cost (U_c)

$$\min U_c = \sum_{j \in J} \sum_{k \in K} y_{jk} \cdot C(T_{jk})$$

Where:

$$C(T_{jk}) = \begin{cases} \alpha_1 (RT_k - T_{jk}), & T_{jk} < RT_k \\ 0, & RT_k \le T_{jk} \le LT_k \\ \alpha_2 (T_{jk} - LT_k), & LT_k < T_{jk} \end{cases}$$

Constraints

$$t_{ij}, t_{jk} \ge 0 \quad \forall i, j, k \tag{3}$$

$$\sum_{i \in I} t_{ij} = \sum_{k \in K} t_{jk} \quad \forall j \tag{4}$$

$$\sum_{j \in J} c_j \ge 1 \tag{5}$$

$$\sum_{k \in K} t_{jk} \le \eta_j \cdot Q \quad \forall j \tag{6}$$

$$\sum_{j \in J} t_{jk} = N_k \quad \forall k \tag{7}$$

$$c_j, x_{ij}, y_{jk} \in \{0, 1\} \quad \forall i, j, k$$
 (8)

$$0 \le \eta_j \le \eta_j^{\text{max}} \quad \forall j \tag{9}$$

A. Units

- Use either SI (MKS) or CGS as primary units. (SI units are encouraged.) English units may be used as secondary units (in parentheses). An exception would be the use of English units as identifiers in trade, such as "3.5-inch disk drive".
- Avoid combining SI and CGS units, such as current in amperes and magnetic field in oersteds. This often leads to confusion because equations do not balance dimensionally. If you must use mixed units, clearly state the units for each quantity that you use in an equation.
- Do not mix complete spellings and abbreviations of units: "Wb/m²" or "webers per square meter", not "webers/m²".
 Spell out units when they appear in text: ". . . a few henries", not ". . . a few H".
- Use a zero before decimal points: "0.25", not ".25". Use "cm³", not "cc".)

B. Equations

Number equations consecutively. To make your equations more compact, you may use the solidus (/), the exp function, or appropriate exponents. Italicize Roman symbols for quantities and variables, but not Greek symbols. Use a long dash rather than a hyphen for a minus sign. Punctuate equations with commas or periods when they are part of a sentence, as in:

$$a + b = \gamma \tag{10}$$

Be sure that the symbols in your equation have been defined before or immediately following the equation. Use "(10)", not "Eq. (10)" or "equation (10)", except at the beginning of a sentence: "Equation (10) is . . ."

C. LATEX-Specific Advice

Please use "soft" (e.g., \eqref{Eq}) cross references instead of "hard" references (e.g., (1)). That will make it possible to combine sections, add equations, or change the order of figures or citations without having to go through the file line by line.

Please don't use the {eqnarray} equation environment. Use {align} or {IEEEeqnarray} instead. The {eqnarray} environment leaves unsightly spaces around relation symbols.

Please note that the {subequations} environment in LATEX will increment the main equation counter even when there are no equation numbers displayed. If you forget that, you might write an article in which the equation numbers skip from (17) to (20), causing the copy editors to wonder if you've discovered a new method of counting.

BIBT_EX does not work by magic. It doesn't get the bibliographic data from thin air but from .bib files. If you use BIBT_EX to produce a bibliography you must send the .bib files.

LATEX can't read your mind. If you assign the same label to a subsubsection and a table, you might find that Table I has been cross referenced as Table IV-B3.

LATEX does not have precognitive abilities. If you put a \label command before the command that updates the counter it's supposed to be using, the label will pick up the last counter to be cross referenced instead. In particular, a \label command should not go before the caption of a figure or a table.

Do not use \nonumber inside the {array} environment. It will not stop equation numbers inside {array} (there won't be any anyway) and it might stop a wanted equation number in the surrounding equation.

D. Some Common Mistakes

- The word "data" is plural, not singular.
- The subscript for the permeability of vacuum μ_0 , and other common scientific constants, is zero with subscript formatting, not a lowercase letter "o".
- In American English, commas, semicolons, periods, question and exclamation marks are located within quotation marks only when a complete thought or name is cited, such as a title or full quotation. When quotation marks are used, instead of a bold or italic typeface, to highlight a word or phrase, punctuation should appear outside of the quotation marks. A parenthetical phrase or statement at the end of a sentence is punctuated outside of the closing parenthesis (like this). (A parenthetical sentence is punctuated within the parentheses.)
- A graph within a graph is an "inset", not an "insert". The word alternatively is preferred to the word "alternately" (unless you really mean something that alternates).
- Do not use the word "essentially" to mean "approximately" or "effectively".
- In your paper title, if the words "that uses" can accurately replace the word "using", capitalize the "u"; if not, keep using lower-cased.
- Be aware of the different meanings of the homophones "affect" and "effect", "complement" and "compliment", "discreet" and "discrete", "principal" and "principle".
- Do not confuse "imply" and "infer".
- The prefix "non" is not a word; it should be joined to the word it modifies, usually without a hyphen.

- There is no period after the "et" in the Latin abbreviation "et al.".
- The abbreviation "i.e." means "that is", and the abbreviation "e.g." means "for example".

An excellent style manual for science writers is .

E. Authors and Affiliations

The class file is designed for, but not limited to, six authors. A minimum of one author is required for all conference articles. Author names should be listed starting from left to right and then moving down to the next line. This is the author sequence that will be used in future citations and by indexing services. Names should not be listed in columns nor group by affiliation. Please keep your affiliations as succinct as possible (for example, do not differentiate among departments of the same organization).

F. Identify the Headings

Headings, or heads, are organizational devices that guide the reader through your paper. There are two types: component heads and text heads.

Component heads identify the different components of your paper and are not topically subordinate to each other. Examples include Acknowledgments and References and, for these, the correct style to use is "Heading 5". Use "figure caption" for your Figure captions, and "table head" for your table title. Run-in heads, such as "Abstract", will require you to apply a style (in this case, italic) in addition to the style provided by the drop down menu to differentiate the head from the text.

Text heads organize the topics on a relational, hierarchical basis. For example, the paper title is the primary text head because all subsequent material relates and elaborates on this one topic. If there are two or more sub-topics, the next level head (uppercase Roman numerals) should be used and, conversely, if there are not at least two sub-topics, then no subheads should be introduced.

G. Figures and Tables

a) Positioning Figures and Tables: Place figures and tables at the top and bottom of columns. Avoid placing them in the middle of columns. Large figures and tables may span across both columns. Figure captions should be below the figures; table heads should appear above the tables. Insert figures and tables after they are cited in the text. Use the abbreviation "Fig. 1", even at the beginning of a sentence.

TABLE I TABLE TYPE STYLES

Table	Table Column Head		
Head	Table column subhead	Subhead	Subhead
copy	More table copy ^a		
^a Sample of a Table footnote.			

sumple of a facile roomote.

Figure Labels: Use 8 point Times New Roman for Figure labels. Use words rather than symbols or abbreviations when

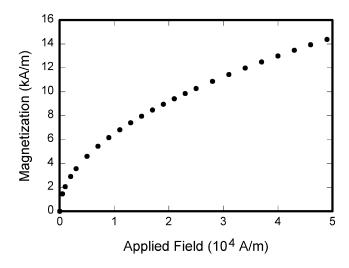

Fig. 1. Example of a figure caption.

writing Figure axis labels to avoid confusing the reader. As an example, write the quantity "Magnetization", or "Magnetization, M", not just "M". If including units in the label, present them within parentheses. Do not label axes only with units. In the example, write "Magnetization (A/m)" or "Magnetization $\{A[m(1)]\}$ ", not just "A/m". Do not label axes with a ratio of quantities and units. For example, write "Temperature (K)", not "Temperature/K".

ACKNOWLEDGMENT

The preferred spelling of the word "acknowledgment" in America is without an "e" after the "g". Avoid the stilted expression "one of us (R. B. G.) thanks ...". Instead, try "R. B. G. thanks...". Put sponsor acknowledgments in the unnumbered footnote on the first page.

REFERENCES

Please number citations consecutively within brackets. The sentence punctuation follows the bracket. Refer simply to the reference number, as in —do not use "Ref." or "reference" except at the beginning of a sentence: "Reference was the first ..."

Number footnotes separately in superscripts. Place the actual footnote at the bottom of the column in which it was cited. Do not put footnotes in the abstract or reference list. Use letters for table footnotes.

Unless there are six authors or more give all authors' names; do not use "et al.". Papers that have not been published, even if they have been submitted for publication, should be cited as "unpublished". Papers that have been accepted for publication should be cited as "in press". Capitalize only the first word in a paper title, except for proper nouns and element symbols.

For papers published in translation journals, please give the English citation first, followed by the original foreign-language citation . [2]
